Hate Crime by Jurisdiction

Jurisdictional data provide aggregate state totals and individual agency breakdowns of bias-motivated incidents (hate crimes) that law enforcement agencies submitted to the Uniform Crime Reporting (UCR) Program.

- In 2010, the UCR Program's Hate Crime Statistics Program included 14,977 participating law enforcement agencies that provided 1 to 12 months of data about bias-motivated crime. Of these agencies, 1,949 (13.0 percent) reported 6,628 incidents.

- The remaining 87.0 percent of agencies participating in the Hate Crime Statistics Program reported that no hate crimes occurred in their jurisdictions.

- Table 12 presents the following data for each state: the total number of participating agencies, the population represented, the number of agencies that submitted data about hate crime incidents, and the number of incidents reported.

- Table 13 provides the data from agencies that reported one or more hate crime incidents in their respective jurisdictions during one or more quarters in 2010.

- Table 14 lists the agencies that indicated that no instances of hate crimes occurred in their respective jurisdictions during the quarter(s) in 2010 for which they submitted reports.

- Tables 13 and 14 present the data by state, and each state is subdivided by agency type. Agency types include: cities, universities and colleges, metropolitan counties, nonmetropolitan counties, state police agencies, tribal agencies, and other agencies. The data published for universities and colleges represent crime reported only by those individual university/college law enforcement agencies that contributed to the UCR Program. The tables do not specify information about educational institutions that reported hate crime data via their local law enforcement agencies.

- Tables 13 and 14 also indicate the number of incidents reported by quarter within the year for which each agency contributed hate crime data to the UCR Program.

- The Methodology section of this publication further explains the procedures used to collect, report, and publish these data.
