

Data Declaration

Forcible Sex Offense Victims Offense Type by Type of Injury, 2011

The FBI collects these data through the FBI UCR Program's NIBRS.

General Comment

This table shows the number of victims associated with each type of injury by the type of weapon/force involved per offense type to which they were connected. It is possible to report up to five types of injury and three types of weapon/force involved for each of the sex offense types listed below.

Methodology

This table uses the following rules and then aggregates the data by the type of injury sustained by the victim:

- Victims – count one for each victim, i.e., Victim Segment, connected to each sex offense type in the incident (in a multiple-offense incident, count a victim for each connected sex offense type).

Notes: This table includes the offense type Murder and Nonnegligent Manslaughter only for informational purposes. This offense type is not a type of injury. The figures represent a count of one for each victim connected to both a Murder and Nonnegligent Manslaughter and another applicable offense type included in the table. For example, in the table, the 8 in the Forcible Rape column for this row represents that eight individuals were a victim of both Murder and Nonnegligent Manslaughter and Forcible Rape. This table counts both Murder and Nonnegligent Manslaughter and a type of injury when this situation occurred.

Type of Injury is collected for only nine NIBRS offense types, with only these offense types used in this table:

- 11A = Forcible Rape
- 11B = Forcible Sodomy
- 11C = Sexual Assault With An Object
- 11D = Forcible Fondling

This table includes only victims with Victim Type I = Individual or L = Law Enforcement Officer.
